5. Convert datatype of column published_at from object to pandas datetime.

```
In [14]: pd.DataFrame(pd.to_datetime(df['published_at']))
```

```
        Out[14]:
        published_at

        0
        2021-07-01 10:00:00

        1
        2021-06-10 16:00:00

        2
        2021-09-20 01:03:32

        3
        2021-03-03 10:00:17

        4
        2021-12-07 13:00:00

        ...
        ...

        37417
        2021-02-12 05:03:49

        37418
        2021-01-16 05:39:05

        37419
        2021-06-02 09:00:10

        37420
        2020-10-20 20:59:30

        37421
        2021-05-23 21:00:31

        37422 rows × 1 columns
```

6. Create a new column as 'published_month' using the column published at (display the months only)

```
In (15): df['published_month']=df['published_at'].str[5:7]
          df[['published_month']]
                published month
Out[15]:
                             06
              2
                             09
              3
                             03
                             12
          37417
                             02
          37418
          37419
                             06
          37420
                             10
          37421
          37422 rows × 1 columns
```

7. Replace the numbers in the column published_month as names of the months i,e., 1 as 'Jan', 2 as 'Feb' and so on.....

```
In [16]: month={'01':'Jan','02':'Feb','03':'Mar','04':'Apr','05':'May','06':'Jun','07':'Jul','08':'Aug','09':'Sep','10':
In [17]: month
         {'01': 'Jan', '02': 'Feb',
Out[17]:
           '03': 'Mar',
           '04': 'Apr',
           '05': 'May'
           '06': 'Jun',
           '07': 'Jul'
           '08': 'Aug',
           '09': 'Sep',
           '10': 'Oct',
           '11': 'Nov'
           '12': 'Dec'}
In [18]: df['published month']=df['published month'].map(month)
          df['published_month']
```

8. Find the number of videos published each month and arrange the months in a decreasing order based on the video count.

```
pd.DataFrame(df.groupby('published_month')['video_id'].count().sort_values(ascending=False))
Out[19]:
                           video_id
